

FORENSIC IMAGING SOLUTIONS

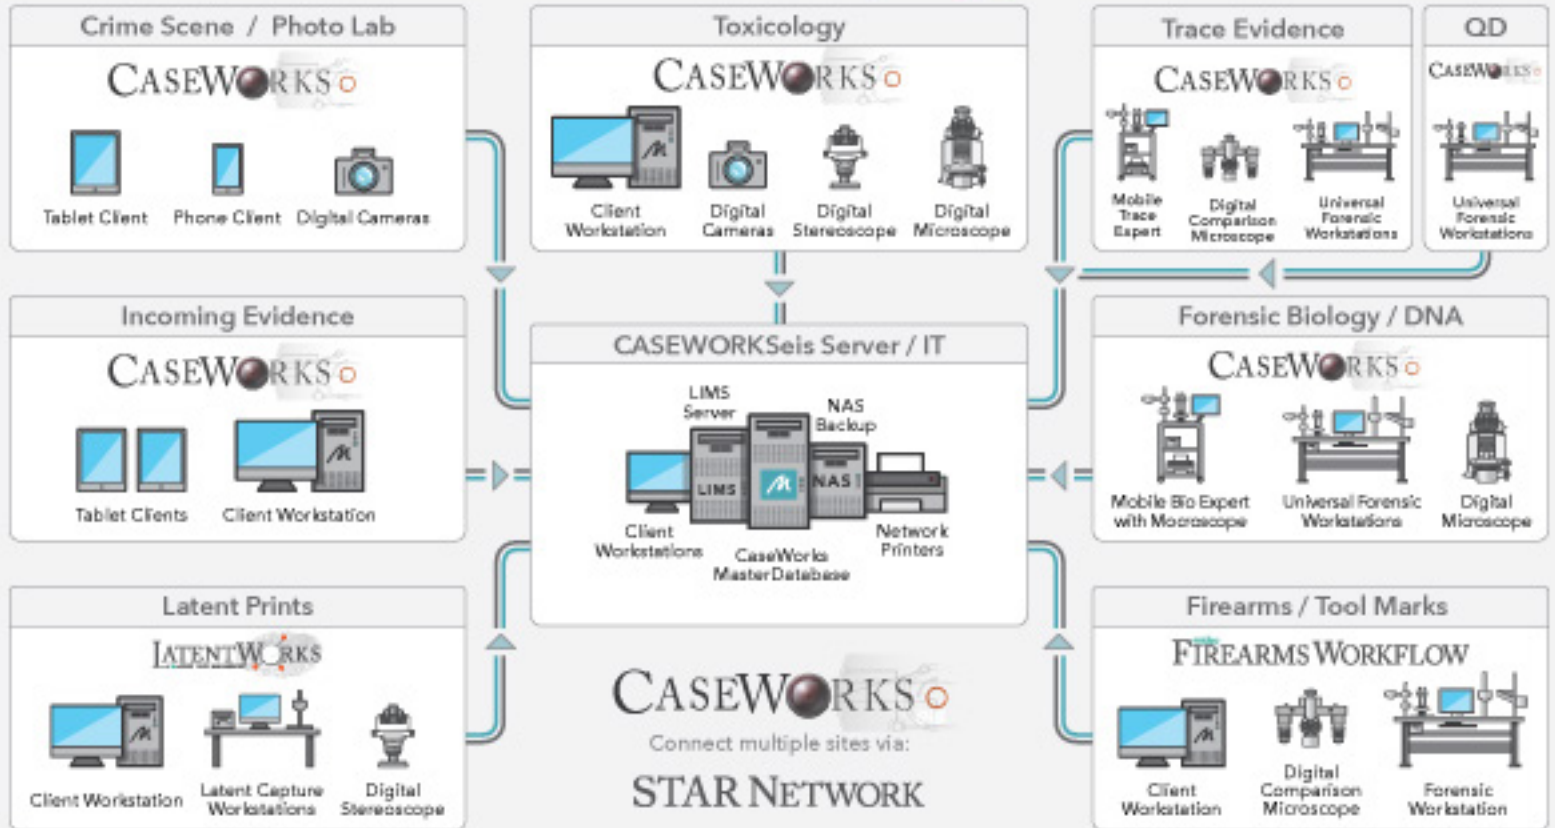

EXTENSIVE SOFTWARE & IMAGING SOLUTIONS

Tailored specifically to meet the needs and standards
of the forensic and law enforcement communities

Mideo Systems has been providing imaging solutions for the full-service forensic lab for more than 20 years. These solutions are custom tailored and configured to meet the individual needs of each lab system. They extend from enterprise, multi-site database configurations to individual departments. Solutions are available from software-only to integrated software and imaging workstations. No job is too big or too small for Mideo Systems.

Forensic Lab Topology

Software Solutions

Image Management & Evidence Documentation Software

CaseWorks is designed to provide enterprise-wide, image management and evidence documentation tools to a full service lab environment. CaseWorks Thin Client was created to extend the capabilities of CaseWorks^{DEMS} by providing the ability to upload, view, and print images using any digital computer, tablet, or laptop. **Includes functions for:**

- Secure image/asset management & reporting
- Audited imaging records and interface to Adobe Photoshop
- Embedded digital evidence "vector" imaging workspace
- Integration of all departments onto a unified imaging platform
- Sharing images with LIMS & with other lab locations
- Integrating various existing imaging devices and workstations
- Internal and external uploading, viewing, and printing
- Secure remote access to the database by authorized personnel

* Interfaces with the most popular forensic LIMS

LATENTWORKS e-LATENT CASE MANAGEMENT

Mideo's LatentWorks is designed to provide the necessary tools for latent print departments to move to a more systematic electronic process for the documentation of latent related evidence. **Includes functions for:**

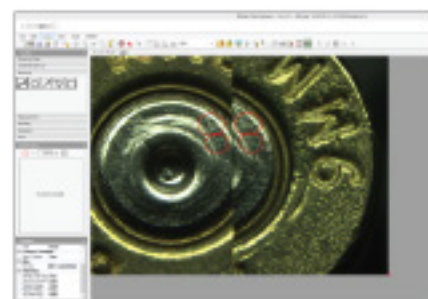

- Step-by-step electronic documentation of the latent examination workflow process
- Contemporaneous note taking
- On-screen comparison and verification
- Direct integration to digital fingerprint (AFIS) archive
- Meeting ISO accreditation requirements & OSAC recommendations
- Sharing information with LIMS & other lab locations

FIREARMS WORKFLOW

Mideo's Firearms Workflow Module provides the ability for moving to paperless documentation of firearms & toolmark evidence through the use of electronic case notes. **Includes functions for:**

- Efficiently managing firearm & toolmark related case images and information
- Contemporaneous documentation
- Meeting ISO accreditation requirements & OSAC recommendations
- Automating case notes & reporting
- Consistent documentation, terminology, and formatting

mideo LIMS INTERFACE

Mideo's LIMS Interface provides the ability to share image/asset information with leading forensic LIMS. **Includes functions for:**

- Retrieving and validating user log-in, case, and item information from LIMS
- Building a folder structure based on LIMS data hierarchy
- Submitting image information directly to LIMS
- Automatically identifying images that have been submitted.

Training Solutions

TRAININGWORKS

Fingerprint Comparison Training Course

Mideo's TrainingWorks Fingerprint Comparison Training Course is designed to provide all of the necessary tools for latent print departments to train latent examiners using real-world content and exercises. **Includes functions for:**

- Complete computer based training with automated grading
- Learning at each students individuals pace
- Lecture and reference material, exercises, exams, and over 12,000 comparisons
- Skills enhancement and assessment
- Real-time on-screen comparison workspace
- Ability to review student observations, visualizing their thought process
- Ability to set level of difficulty based on student experience

Hardware Solutions

Evidence Documentation Imaging Workstations

Mideo offers ergonomic hardware configurations designed specifically for individual forensic applications. The Universal Workstation includes microscopes, cameras, articulated arms with cameras, computers and accessories all of which are fully adjustable for the user's comfort and safety. All systems are scalable to enable organizations to implement the solution that fits their needs and budget best.
